IN THE CLAIMS

Please substitute the following claims for the pending claims with the same numbers respectively:

Claim 1 (Original): A template type substrate used for opto-electric or electrical devices which comprises A) a layer of bulk mono-crystal nitride containing at least one element of alkali metals (Group I, IUPAC 1989) and B) a layer of nitride grown by means of vapor phase epitaxy growth wherein the layer A) and the layer B) are combined at non N-polar face of the layer A) and N-polar face of the layer B).

Claim 2 (Original): A template type substrate used for opto-electric or electrical devices according to claim 1, wherein the layer A) of bulk mono-crystal nitride includes gallium or aluminum-containing nitride and aluminum-containing nitride and is represented by the general formula of  $\text{Al}_x\text{Ga}_{1-x}\text{N}$  wherein  $0 \leq x \leq 1$ .

Claim 3 (Original): A template type substrate used for opto-electric or electrical devices according to claim 1, wherein the layer B) of nitride grown by means of vapor phase epitaxy

Preliminary Amendment

growth is represented by the general formula of  $\text{Al}_x\text{Ga}_{1-x-y}\text{In}_y\text{N}$ ,  
where  $0 \leq x \leq 1$ ,  $0 \leq y \leq 1$ ,  $0 \leq x+y \leq 1$ .

Claim 4 (Original): A template type substrate used for  
opto-electric or electrical devices according to claim 1, wherein  
the layer B) is prepared on a substrate having the layer A) by  
means of MOCVD, HVPE or MBE.

Claim 5 (Original): A template type substrate used for  
opto-electric or electrical devices according to claim 4, wherein  
the layer B) is composed of at least two layers and the first  
layer B1) is prepared on a substrate having the layer A) by means  
of MOCVD or MBE and the second layer B2) is prepared on the first  
layer B1) by means of HVPE.

Claim 6 (Original): A template type substrate used for  
opto-electric or electrical devices according to claim 1, wherein  
the layer A) of bulk mono-crystal nitride is prepared on a seed  
having the layer B) by crystallization of nitride in a  
supercritical ammonium solution containing at least one element  
of alkali metals.

Application No.: filed concurrently  
June 10, 2005

Claim 7 (Original): A template type substrate used for opto-electric or electrical devices according to claim 1, which further comprises C) a layer of gallium or aluminum-containing nitride grown by means of vapor phase epitaxy growth wherein the layer A) of bulk mono-crystal nitride containing at least one element of alkali metals (Group I, IUPAC 1989) is prepared on both of non N-polar face and N-polar face of the seed layer B) as layers A1) and A2) and the layer C) is combined at non N-polar face of the layer A1) and N-polar face of the layer C).

Claim 8 (Original): A template type substrate used for opto-electric or electrical devices according to claim 7, wherein the layer C) of the gallium or aluminum-containing nitride is prepared on a substrate of the layer A1) by means of MOCVD, HVPE or MBE.

Claim 9 (Original): A template type substrate used for opto-electric or electrical devices according to claim 7, wherein the layer C) is composed of at least two layers and the first layer C1) is prepared on a substrate of the layer A1) by means of MOCVD or MBE and the second layer C2) is prepared on the first layer C1) by means of HVPE.

Claim 10 (Original): A template type substrate for opto-electric or electrical devices according to claim 1, wherein the substrate contains chloride and has a main surface substantially consisting of Ga-polar face.

Claim 11 (Original): A template type substrate used for opto-electric or electrical devices according to claim 1, wherein the substrate has a dislocation density of  $10^6/\text{cm}^2$  or less.

Claim 12 (Original): A template type substrate used for opto-electric or electrical devices according to claim 1, wherein the layer A) or the layers A1) and A2) are of bulk mono-crystal nitride prepared by crystallization of nitride in a supercritical ammonium solution containing at least one element of alkali metals.

Claim 13 (Original): A template type substrate used for opto-electric or electrical devices according to claim 1, wherein the layer A), having a pair of C-plane surfaces and a diameter of 1 inch or more, is prepared by A-axis direction growth of bulk mono-crystal nitride in a supercritical ammonium solution containing at least one element of alkali metals.

Application No.: filed concurrently  
June 10, 2005

Claim 14 (Original): A template type substrate used for opto-electric or electrical devices according to claim 13, wherein the substrate has a dislocation density of  $10^4/\text{cm}^2$  or less.

Claim 15 (Original): A template type substrate used for opto-electric or electrical devices according to claim 1, wherein the concentration of at least one alkali metal in the gallium or aluminum-containing nitride layer B) or C) and layers B1) and B2) or C1) and C2) is lower than that in the layer A) prepared by crystallization of nitride in a supercritical ammonium solution containing at least one element of alkali metals.

Claim 16 (Original): A template type substrate used for opto-electric or electrical devices according to claim 2, wherein the nitride layer A) is composed of AlN or GaN.

Claim 17 (Currently amended): A template type substrate used for opto-electric or electrical devices according to ~~any one of claims 1, 5, 7 and 9~~ claim 1, wherein the layer B), B1), C) or C1) is prepared by MOCVD and has a thickness of 0.1 to 3  $\mu\text{m}$ .

Preliminary Amendment  
Application No.: filed concurrently  
June 10, 2005

Claim 18 (Original): A template type substrate for opto-electric or electrical devices according to claim 17, wherein the layer B) or C) obtained by the growth method from the gaseous phase has the general formula of  $\text{Al}_x\text{Ga}_{1-x-y}\text{In}_y\text{N}$ , where  $0 \leq x \leq 1$ ,  $0 \leq y < 1$ ,  $0 \leq x+y \leq 1$ .

Claim 19 (Original): A template type substrate used for opto-electric or electrical devices according to claim 18, wherein the layer B) or C) is combination of double layers AlGaN and GaN.

Claim 20 (Currently amended): A template type substrate used for opto-electric or electrical devices ~~accerding~~ according to claim 1 ~~ex-8~~, wherein the layer B) or C) is a gallium or aluminum-containing nitride containing silicon (Si) or oxygen (O) as donor dopants.

Claim 21 (Currently amended): A template type substrate used for opto-electric or electrical devices ~~accerding~~ according to claim 1 ~~ex-7~~, wherein the layer B) or C) is a gallium or aluminum-containing nitride containing magnesium (Mg) or zinc (Zn) as acceptor dopants.

Preliminary Amendment  
Application No.: filed concurrently  
June 10, 2005

Claim 22 (Currently amended): A template type substrate for opto-electric or electrical devices ~~accerding~~ according to claim 20 ~~or 21~~, wherein the concentration of dopants ranges between  $10^{17}/\text{cm}^3$  and  $10^{21}/\text{cm}^3$ .

Claim 23 (Original): A process of preparing a template type substrate which comprises steps of:

(a) preparing a layer A) of bulk mono-crystal nitride containing at least one element of alkali metals (Group I, IUPAC 1989) to have a thichness for substrate by crystallization of gallium or aluminum-containing nitride on a seed from a super-critical ammonia-containing solution, and (b) forming a layer B) of nitride by means of vapor phase epitaxy growth on Al or Ga-polar face of the layer A) to get a substrate comprising the layer A) and the layer B) combined at Al or Ga-polar face of the layer A) and N-polar face of the layer B).

Claim 24 (Original): A process of preparing a template type substrate according to claim 23, which comprises further step of (c) polishing one of the faces of the layer B) to get a substrate for vapor phase epitaxy.

Preliminary Amendment  
Application No.: filed concurrently  
June 10, 2005

Claim 25 (Original): A process of preparing a template type substrate according to claim 24, which comprises further step of annealing the substrate comprising the layers A) and B) in the atmosphere that does not contain hydrogen but does contain oxygen at temperature between approx. 600 and 1050°C, thus producing material with better crystalline quality than before the annealing.

Claim 26 (Original): A process of preparing a template type substrate according to claim 25, wherein the step of annealing is carried out in the atmosphere of inert gas with an addition of oxygen between 10 and 30 vol.%.

Claim 27 (Currently amended): A process of preparing a template type substrate according to claim 26, wherein the [[the]] step of annealing is carried out in a single step or in multiple steps until the desired level of impurities (such as hydrogen and/or ammonia or ions formed from the impurities formed during the crystallization and/or annealing process) is reached.

Claim 28 (Original): A process of preparing a template type substrate according to claim 25, which comprises further step of removing impurities from bulk mono-crystalline nitride by a

process of rinsing in the environment of supercritical ammonia-containing solvent, water or carbon dioxide or being subjected to the action of gaseous hydrogen, nitrogen or ammonia.

Claim 29 (Original): A process of preparing a template type substrate according to claim 23, wherein the step of rinsing is carried out with aid of the application of ultrasounds or the exposure to an electron beam.
